

ALS COMPASS 2.0

right solutions.
right partner.

Update now and experience the app like never before

New features include

Save a COC as a template for any project. Templates can be viewed & edited as required

4 new sample types extending usage beyond water & soil. New matrices include air, biosolid, biota & solid

Improved sample matrix management by allowing you to define default matrix types at the project level

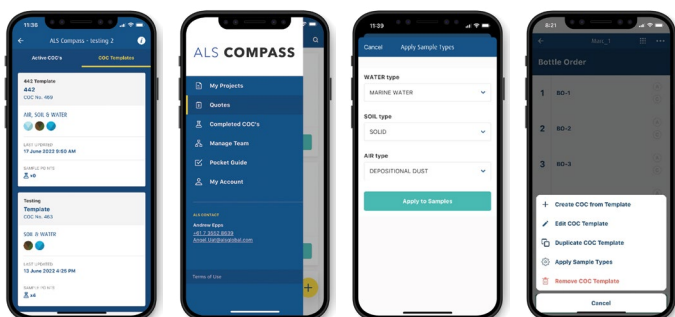

Enhanced csv loading supporting additional columns (sample type & matrix) to improve speed of COC creation

Improvement to stability and robustness across iOS & android applications.

Your FREE mobile application that transforms your sampling experience

- Handwriting on containers is no longer required
- Automatic creation of COC
- Project Managers can check COC's remotely before sending to ALS
- GPS locator with the option for photos & sample meta data
- Sampling can be planned and bottle orders placed
- Built-in checks ensure all samples and ALS containers are collected
- ALS quotation available directly from the app
- Unique Barcode on ALS sample containers

Works online and offline
on smartphones and tablets
